Aloha, welcome to SUSI Green Building Team homepage.

Study of the United States Institutes (SUSI) on Global Environmental Issues is six-week intensive study programs for multinational groups of university faculty and students from abroad. Institutes are held at university campuses throughout the United States and focus on global environmental issues in American studies. SUSI Green Building Team is forming by members who came from Malaysia, Myanmar and Philippines. We are non-profit body who carry out environmental movements in our nation and mainly focus on green building issues.

The buildings in which we live, work, and play protect us from nature's extremes, yet they also affect our health and environment in countless ways. As the environmental impact of buildings becomes more apparent, a new field called "green building" is gaining momentum.

Green, or sustainable, building is the practice of creating and using healthier and more resource-efficient models of construction, renovation, operation, maintenance and demolition.

WELCOME TO BIKING WITH SUSI

In 2011, five students from each country representing Malaysia, the Philippines, Thailand, and Burma participated in a program called 'Study of the United States Institutes for Student Leaders on Global Environmental Issues (SUSI) that is funded by The U.S. Department of State Bureau of Education and Cultural Affairs, and hosted by East-West Center. The program is divided into two phases; the first part took place in Oahu Island, Hawai'i, while the second part took place in California, Colorado, and Washington DC.

What we are doing right now

It has been about 9 months since we, the participants of SUSI 2011, came back to our respective countries, still remembering our wonderful time in the U.S. Not only did we have an amazing time, we also learned many important lessons in terms of global environmental issues and about life, discovering our own potentials, and in the process, we made true long lasting friendships.

Since we are finally back at home, Thai SUSI is trying to set up individual projects in our communities or university campuses. After some struggling and trying to manage between our lives and university works,
