Subject: [HIREP Wind EIS] New Comment

A New Comment has been Submitted

A further concern I have is that windmills are going to be obsolete sooner than most believe. Turbines that mount on the ocean floor off shore that take advantage of one way ocean currents (eg. The Molokai Express), will be in service soon. At a world alternate energy conference several years ago, the west coast of Ireland and the Hawaiian islands were said to be the two best locations in the world. Apparently Ireland is proceeding with this.....why aren't we?
