Joint Federal and State
Public Scoping Meeting & Notice of Intent to Prepare EIS for
Hawai'i Interisland Renewable Energy Program - Wind

Wednesday, February 2, 2011

5:30 - 9:00 p.m.

Pomaikai Elementary School (Cafeteria)

4650 S. Kamehameha Avenue

Kahului, Maui, Hawai'i 96732

BEFORE: SANDRA J. GRAN, CSR NO. 424

PRESENTATIONS:

Joshua Strickler, Facilitator, Renewable Energy Program
Allen Kam, HIREP EIS Manager

Anthony Como, Director, Permitting & Siting
Steve Lindenberg, Senior Advisor, Renewable Energy

PUBLIC SPEAKERS:

Doug McLeod
Irene Bowie
Victor Reyes
Warren Shibuya
DeGray Vanderbilt
Beverly Zigmond
Dick Mayer
Sean Lester
Jocelyn Perreira
Keala Kaopuiki-Santos
Isaac Hall
Hokuao Pellegrino
David Doyle
Rob Parsons
Kimokeo Kapahulehua
Ekolu Lindsey

P R O C E E D I N G S :

MS. CHANG: Aloha kakou, my name is Dawn Chang. I'm going to facilitate tonight's meeting. Tonight we're going to have two phases. The first phase is going to be an open house. We have these banners and there will be people near them. You can come and take a look at them and ask questions. And we'll be doing that probably for about half an hour. And then after that we'll go into some formal presentations. And then we'll go to the formal scoping of taking your comments. All right.

We also have Sandra. She's a court reporter that's in the back of the room. If there are some of you who would like to give her your comments now, please do so, you can go in the back of the room; but she will also take all comments once we begin the public scoping.

So thank you again. Please roam around. There's water and snacks over here.

(Pause in Proceedings: 5:29-5:30)

MS. CHANG: Aloha kakou. Hello. Hi, again. My name is Dawn. We're not going to start just yet. I just want to encourage you that there's these banners with some information about the process and we would urge you to take a look at them. We'll probably keep them open for another 20 minutes before we start the formal process.

And, again, for those of you who would prefer to

1 give your comments to the court reporter on a one on one,
2 she's in the background, so please go and speak to her. If
3 not, walk around and talk to people at the banners.

4 Again, thank you. We'll probably start in 20
5 minutes. And those of you -- Please come and sign in. The
6 sign-in table is at the middle of the room.

7 (Pause in Proceedings: 5:38-5:56)

8 (Hawai'ian Chant.)

9 MS. CHANG: Mahalo.

10 Aloha kakou. My name is Dawn Chang. And I am going
11 to facilitate tonight's meeting. Thank you very much for
12 being here. I appreciate you being here on this Wednesday
13 evening. The format of tonight's meeting is we started off
14 with some open houses. We will continue to have the banners
15 up there after the meeting if you want to go and look at them,
16 but we're going to move now to the formal process of this
17 public scoping meeting.

18 I've been told I need to go through some safety
19 measures first. We would ask that you come up to the mic to
20 speak. We have a court reporter, Sandra, who is here and it
21 is very important. We want to make sure that we accurately
22 get your information as well as your name. So when you come
23 up, introduce yourself and if you could state your name, even
24 better if you could spell your name. But if you come up, just
25 be careful, there's some wires here. So be careful as you

1 come up. The bathrooms are in the back. I think you can see
2 where is the emergencies are. We just want to be safe
3 tonight.

4 Again, welcome. This is the Joint Federal and State
5 Public Scoping Meeting for the Hawai'i Interisland Renewable
6 Energy Program, the Wind. What we're calling HIREP. I want
7 to make some introductions before we begin the presentations.
8 First, I would like to introduce from the United States
9 Department of Energy, who have come all the way from
10 Washington, we have Tony Como, Anne Finken, Ellen Russell and
11 Steve Lindenberg.

12 Also from the Department of -- Bureau of Ocean
13 Energy Management and Regulations, with the Department of
14 Interior, we have Mark Eckenrode. With the Department of
15 Business -- State Department of Business, Economic Development
16 and Tourism, Josh Strickler, Allen Kam, Li'ula Nakama and
17 Malama Minn.

18 And I'm not too sure, are there government officials
19 that are here? I apologize if I haven't recognized you. I
20 know there's a councilwoman here.

21 COUNCIL MEMBER BAISA: Yes.

22 MS. CHANG: Thank you.

23 Again, I appreciate that -- your being here. I
24 would like to start off first the -- we're going to have a
25 presentation from -- I would like to call up Steve Lindenberg,

1 who will talk about the Department of Energy and its overall
2 kind of viewpoints about Hawai'i renewable energy. Thank you.

3 MR. LINDENBERG: I'm just going to pull this off.

4 Aloha. I've been living here on the Hawai'ian
5 Islands for about seven months on assignment helping to
6 implement the Hawai'i Clean Energy Initiative with the
7 Department of Energy supporting the State and the other
8 stakeholders across the islands in trying to think about how
9 to accomplish that task.

10 As you probably all know, oil is the primary and
11 almost sole energy supply for the Hawai'ian Islands. That is
12 a very, very challenging place to be in the world today. You
13 know that a \$100 barrel of oil is happening right now. In the
14 past it's been worse than that in the summer of '08. And so
15 in 2008 during that time frame the US Department of Energy in
16 combination with the State of Hawai'i undertook an effort to
17 try to change that for the future of the islands. And the
18 intention is to try to replace oil by putting in energy
19 efficiency, a great opportunity to reduce energy use, very
20 important for all of the islands, and renewable energy.

21 Last year the legislature went forward with a bill
22 that established this as a state legislative mandate and
23 instructed the utility HECO to reach a 40-percent renewable
24 portfolio standard by the year 2030. The Kauai Island Utility
25 Cooperative has voluntarily joined into this process to also

1 try to reach that much renewable or more. And so what we have
2 is a requirement that actually has some penalties for the
3 Hawai'ian electric companies if they don't reach those
4 standards. And that's a part of why we're here today, is that
5 we are working between the State, the Department of Energy,
6 many businesses and interest groups across the islands to try
7 to imagine how can we get to that renewable portfolio
8 standard.

9 The concept of a portfolio standard is important.
10 Right now your portfolio is almost a single temple, oil. Most
11 states in the union have got quite a number of other energy
12 resources. They use natural gas. They use nuclear power.
13 They use wind. They use solar. They use coal. Yours is a
14 very limited scope and the challenge right now is to think
15 about what are the opportunities and where are the potentials
16 for investment. And that's very much what this entire process
17 is about.

18 We've done some analysis. We've looked at what
19 different options exist, which ones are available today. And
20 wind is a wonderful resource on the Hawai'ian Islands. It
21 happens not to be on O'ahu, but on the other islands it is.
22 Specifically here in Maui County there's quite a lot of wind
23 on each of the three major islands and potential for being
24 able to generate energy on these islands and to lay underwater
25 cables, marine cables to the other island is a real

1 opportunity.

2 So that's what we're here to talk about tonight, to
3 try and understand how we can get a clear impression of folks'
4 needs and interests across the islands and be able to put that
5 into an environment impact analysis. You'll hear more about
6 that from others.

7 MR. STRICKLER: You said everything perfect, so --

8 UNIDENTIFIED SPEAKER: Way to go.

9 MR. LINDENBERG: So that's the introduction of why
10 the project, why are we here talking about wind and why are we
11 talking in Maui.

12 And I guess do you want to introduce the next group,
13 then, Dawn?

14 MS. CHANG: Thank you.

15 The next group -- I think it's really important:
16 Wind is not a done deal. And I think what Steve and Josh --
17 part of this message here is the concept of wind is
18 conditioned upon compliance with the environmental process.
19 And I think we have both Tony Como from the Department of
20 Energy as well as Allen Kam, who will talk about the --
21 exactly the environmental process that we are proposing.

22 MR. COMO: Thank you, Dawn.

23 And I want to thank everyone for taking time out of
24 your personal lives to attend this meeting tonight. It's not
25 the most convenient thing after work and, you know, before you

1 sit down with your family, so we really do appreciate it.

2 Allen and I actually have a simpler process or a
3 simpler job than Steve and Josh. They and their respective
4 organizations in the Department of Energy and DBEDT are to
5 promote, to develop particular programs like Steve explained
6 to you. And you could question whether one program is going
7 to be superior to another. Allen's and my job is a lot
8 simpler. We're looking at one program. We're looking at the
9 development of interisland wind and all we're doing is
10 analyzing: What would be the environmental impacts if a
11 program like that were to be developed in Maui County? Okay?

12 So what we're doing is a completely clinical
13 empirical analysis, a broad one. We're doing a programmatic
14 approach, which means: We don't have any sites in mind. We
15 don't have particular routes for cables in mind. We have
16 broad areas on the respective counties where wind resources
17 are the strongest and would be best for development. We have
18 generalized corridors among the islands where transmission
19 submarine cables might best go, but we have no specific
20 locations for anything.

21 So, therefore, the analysis that we're doing -- and
22 this story board closest to me talks about a programmatic
23 Environmental Impact Statement. It's going to be a rather
24 broad-brushed analysis. It's not going to provide the
25 agencies with the kind of project specific information that

1 the federal agencies and the state agencies will ultimately
2 need if they ever decide to site specific projects.

3 I'm just going to take a -- I don't want to take all
4 Allen's thunder away. Just bear with me a minute on where we
5 are. We are just at the very beginning of the environment
6 review process. We're in scoping. And, you know, all that
7 means is we're here to have you tell us: What things we
8 should be studying? What are the resources that would be
9 affected in the area if something like this were developed?
10 Are there alternative ways of doing things like this? If
11 there -- or would be there be ways of mitigating any impacts?

12 We're just here to get input from you and our
13 process will not work at all unless you actively participate
14 now and throughout the entire process. Okay? So scoping is
15 over on March 1st. We have a variety of ways on the story
16 boards to explain -- in fact, I think we have seven different
17 ways of you getting your input to us. This is one of them.
18 And in spite of the fact we have a court reporter, it's an
19 informal meeting and we'd like to keep it that way. Okay?

20 So after we get your comments and close the period
21 on March 1st, then we set to work on literally writing the
22 programmatic environmental impact statement. We think we will
23 probably get a draft document finished roughly during the fall
24 of this year. I think our federal notice thought that we
25 might get it in October. It could be, but it will be roughly

1 before the end of the year.

2 Once we get that draft done, we're going to be
3 distributing it. Some of you have signed up where you're
4 going to be contacted by us to find out if you want a copy of
5 the document, how you would want it: Electronically, we can
6 mail you a hard copy, you can download it, it will be in a
7 variety of public locations. And then you're going to have at
8 least at the federal level at least 45 days to review the
9 document, maybe -- I don't know if the State has -- Okay. The
10 same thing. So it would be a minimum of 45 days for you to
11 review the document and get us comments on it.

12 And during that 45-day period we're going to be back
13 here and doing -- conducting meetings that look exactly like
14 this. So now you're telling what you think we should study.
15 When we come back towards the end of the year with having
16 given you a draft document, we want you to tell us how well we
17 studied: Did we miss something? Did we get analysis wrong?
18 Did we leave something out? Okay?

19 We're going to take -- Every comment that we get
20 from you on the draft -- whether it's verbal at a meeting like
21 this, whether you send something in to the website, whether
22 you send us a handwritten letter -- every single comment is
23 going to appear in the final document. If you send us a
24 20-page document letter, you'll see 20 pages, a xeroxed copy,
25 we're going to bracket every single point that you've made in

1 your letter and right next to it you'll see what we have done,
2 how we've addressed your comment: Did we need to change
3 something in the document? Did we have to do an additional
4 analysis? You'll know exactly how we've responded to your
5 comment.

6 And then we're going to publish the final
7 environmental impact statement addressing every single comment
8 that you send us. That puts us down to the -- you can't see
9 it maybe from where you're sitting, but the next to last white
10 oval on the bottom of this chart. And then at the federal
11 level, no federal agency could make a decision any sooner than
12 30 days after that final environmental impact statement is out
13 and so you can take a look at that as well.

14 We think that that last oval on the bottom probably
15 happens, with a little luck, April of 2012. That would only
16 be the end of this programmatic review. That's going to
17 inform the host of federal agencies and state agencies that
18 would have some type of a role in approving all the various
19 pieces of a program like this. Okay?

20 Then, and only then, if a real live project, a very
21 specific project of putting a particular wind generation
22 facility at a particular site and siting a certain cable
23 actually comes to fruition, then an additional project
24 specific environmental impact statement would have to be done
25 and the process would look exactly like the programmatic one

1 that we have right here.

2 So you're not here to hear me talk and babble on,
3 we're here to hear you, but I just want to let my colleague
4 Allen say something.

5 MR. KAM: Well, I just wanted to reiterate Tony's
6 point that, you know, after -- even after this programmatic --
7 what this programmatic is really doing is setting up the
8 framework for what could happen, where a wind farm or where a
9 cable or what sort of infrastructure could go. Any other --
10 any wind farm or cable that is actually developed, should it
11 be developed as a part of this plan, needs to go through
12 another environmental impact statement process. So after this
13 programmatic, there's no permits that are going to be issued,
14 there's no construction that will result. Another
15 environmental impact statement that specifically looks at the
16 impacts of a specific project has to be performed.

17 The other thing that I want to say is that the state
18 process does parallel the federal process. The state EIS
19 process does parallel the federal EIS process with one notable
20 exception, which is under the state law we need to complete a
21 thorough cultural impact assessment and that will be done.
22 Mahalo.

23 MS. CHANG: Thank you, Allen and Tony.

24 I think they both told you what this -- this is a
25 programmatic EIS and what we'll be look being for. I want to

1 tell you what this is not about. This is not for you to
2 comment on a draft EIS. We don't have that. That's really
3 what the scoping is all about. This is not to comment on a
4 project specific, because we don't have a project. This is,
5 again, the programmatic. We're really here just to listen to
6 what your comments about, as Tony said, what should be in the
7 programmatic EIS, what should we be studying.

8 The format for this public scoping meeting, it is
9 really an opportunity for to us listen to you; therefore, this
10 is not going to be a meeting where you'll ask a question and
11 somebody will answer. The court reporter is here really just
12 to take your comments to ensure that we are going to consider
13 all of those comments as we prepare the programmatic and the
14 state EIS. So, again, this is not going to be an opportunity
15 for you to ask questions and expect a response, but we want to
16 hear all of your comments tonight.

17 I hope you don't mind, I just want to kind of go
18 over some what I call -- in order to kind of facilitate and
19 make sure that the process is fair for everyone. Again, we
20 have Sandra that's a court reporter. She's going to take
21 everybody's comments down. Come up here, if you don't mind,
22 state your name, spell it, speak into the mic. If you have a
23 written testimony, that's really helpful if you don't mind
24 leaving it here, again, to ensure that Sandra is taking down
25 all of your comments.

1 Obviously, this is a really important matter for
2 you. Yesterday we met in Honolulu and we had a really good
3 turnout of people. So this is important and I really -- if
4 you don't mind, I would like to ask your permission, I would
5 like to permit everybody to speak once before someone comes up
6 to speak a second time just to ensure that we're giving
7 everybody an opportunity to speak. And because -- you know,
8 we're going to be here 'til 9 o'clock, but if -- we would ask
9 that just keep your comments to a reasonable time. It looks
10 like, you know, if -- last night we had an opportunity where
11 people came up and they testified, they gave comments twice.
12 But if you would just kind of keep your comments focused and
13 within a reasonable time period.

14 And last of all, if -- we have these note cards and
15 those of you who are interested in testifying or submitting
16 your comments, it's really helpful if you sign these up as we
17 can confirm that we've got your names right. Okay? So if
18 you've got -- if you want to come up and give us a comment,
19 please sign up. If not, you'll have an opportunity to come
20 and speak, but it just helps to ensure that the record is
21 really complete. And, finally, this looks like a really good
22 group and everybody is going to be very respectful and
23 courteous. And, again, I thank you all for being here.

24 So now I'm going to start the actual comment period.
25 I do have a list. The first person that we have is Doug

1 McLeod and then the next person is Irene Bowie. Bowie?

2 I also did want to recognize Councilman White is
3 here. Thank you for being here. So --

4 UNIDENTIFIED SPEAKER: And Gladys Baisa is here
5 today.

6 MS. CHANG: Yes. Thank you. She was the one who
7 helped us find Keokea. Thank you.

8 So Doug and then Irene.

9 MR. McLEOD: Good evening, everyone. My name is
10 Doug McLeod and I'm the Maui County Energy Commissioner. I'm
11 here tonight on behalf of Mayor Arakawa. And I'm here first
12 to thank you for coming out. We all have other time
13 commitments and to come out here at 6 o'clock in the evening
14 to give your opinion, we're here to listen to it because it's
15 got to be important for you to come out and we appreciate it.

16 The County of Maui has had an opportunity to look at
17 the preliminary information that we've gotten and we do have
18 several specific concerns. We're going to raise them for you
19 now as general comments. The County itself will provide
20 written comments on the proposal by the end of February. And
21 to the extent you want to submit any comments to us, feel
22 free, but ultimately your comments are going to end up going
23 to the State and to the DOE.

24 Several parts of the proposal as we read them seem
25 unclear as written and we do have concerns. Part of it is the

1 nature of this programmatic EIS because we find ourselves
2 really asking where will these turbines be located. You know,
3 sitting in Washington, I know that all of our islands can look
4 kind of close, but for us there's really a genuine question in
5 our minds. Are we talking about turbines that may end up on
6 the island of Maui? Are we talking about turbines that would
7 be only on Lana'i? Are we talking about turbines that would
8 be on Lana'i and Moloka'i? So the Mayor's office at this
9 point has sent around representatives to each of the hearings
10 on each of the islands and we're going to be waiting to hear
11 back from people on every island to try and understand how
12 they feel.

13 But as we sit here today, we have a genuine concern
14 that we can't tell people where these turbines are proposed to
15 be and without that ability, it's hard to give intelligent
16 comments. It really does make a difference when you look at
17 the cultural aspects, it really does make a difference when
18 you look at the visual aspects to understand specifically
19 where these turbines would be.

20 The other part of the proposal that's generally
21 unclear to us is the cable connection to Maui. You know, as
22 we sit here and look at this, we have a hard time
23 understanding why in the drawings the cable is connecting to
24 Maui. Is it something where if our power on Maui goes down,
25 then power on O'ahu could be a backup for Maui? In which

1 case, there might be some benefit to the County that we don't
2 see otherwise in the proposal.

3 Then final comment, we really do, I guess, wonder if
4 it's right to rule out the idea that this power could be made
5 on O'ahu because that is kind of an operating assumption of
6 this proposal for 400 megawatts of power in Maui County, is
7 the notion that this power couldn't be generated on O'ahu.
8 And so, again, as we look at it and as we listen to your
9 comments and the comments of these experts, we really want to
10 get an answer to these general questions. So, again, our
11 process now is that we're going to be listening to what you
12 have to say and we'll be submitting comments on behalf of the
13 County by the end of the month.

14 I did notice we have Council Members Baisa and White
15 here and we'll also be contacting your offices to get comments
16 that you may have as well.

17 Thank you.

18 MS. CHANG: Thank you.

19 Next, Irene. And then after Irene we have signed up
20 Victor Reyes.

21 MS. BOWIE: Mahalo. I'm Irene Bowie with Maui
22 Tomorrow Foundation. Maui Tomorrow supports alternative
23 energy and the State's efforts to reduce our dependence on
24 imported oil, but Lana'i's wind farm alone would be ten times
25 larger than Kaheawa at Ma'alaea, so questions must be

1 addressed.

2 Federal and state environmental impact laws require
3 a study of alternatives, yet this one studies big wind and no
4 action. Nowhere in the document does it suggest a study of
5 wave, geothermal, ocean thermal, energy conversion, solar or
6 other renewable energy sources.

7 Regarding the undersea cable, who will own it?
8 Originally the State said that it would own it. At a recent
9 legislative information briefing session the State indicated
10 that it's considering a shared ownership between the State and
11 a private investor such as Castle & Cooke. Were that the
12 case, a privately held company would own both the supply and
13 the delivery system for 10 percent of O'ahu's electricity.

14 What will it cost? Originally estimated at \$1
15 billion, some estimates expect it to double while DBEDT now
16 talks about lowering the cost.

17 Will redundancy be required for the undersea cable?
18 And if so, how many cables will be needed and what will they
19 add to the cost?

20 How will it be paid for? Will the legislature be
21 asked to authorize bond funds? Will it be fund directly
22 taxpayers and rate payers? How much will the federal
23 government provide in loans and/or grants? And what is the
24 military, currently the largest HECO customer on O'ahu's role
25 in this project?

1 The EIS/EA PN refers to decommissioning. How far
2 will the developer be required to decommission? Will they be
3 required to remove the 1,100 cubic yards of cement in the
4 foundation and the 60-foot diameter holes be refilled and
5 replanted?

6 Will this EIS/EA study the reduction of demand
7 conversion by the O'ahu users of this power, including O'ahu
8 businesses, residents and the military?

9 There has been, as reported at a recent legislative
10 information briefing, a number of very relevant reports
11 prepared, but not released to the public including the
12 National Renewable Lab Study done by Booz Allen of the
13 financial implications of this project. When will these be
14 made available to the public?

15 Will this study include an analysis of the impacts
16 on Lana'i's Kanepu'u Dryland Forest Preserve, on the highly
17 endangered Hawai'ian monk seals who regularly haul out at
18 Polihua Beach where the Lana'i end of the undersea cable will
19 come ashore; on the also endangered Hawai'ian petrel whose
20 flight path will directly intercept with the 170 wind
21 turbines, turbines with a wingspan equal to a 747 Jumbo Jet?

22 Why does the EIS/EA suggest only limited field
23 studies of the impacted area? Will this study rely primarily
24 on a literature review rather than on a thorough analysis of
25 the area, an area known to be populated with Hawai'ian and

1 cultural -- cultural land archaeological sites? And this is
2 specifically on Lana'i.

3 And if Moloka'i is unable or chooses not to
4 participate in this industrial wind powerplant, will the
5 project still happen? Will the State contract with only one
6 supplier of neighbor island wind?

7 Please address these questions and the community's
8 concerns before moving forward on the project. Thank you.

9 MS. CHANG: Thank you, Irene. Irene, would you mind
10 leaving your --

11 MS. BOWIE: Sure. I have a copy.

12 MS. CHANG: Okay. Thank you so much.

13 The next is Victor and then after Victor, Warren
14 Shibuya.

15 MR. REYES: Aloha and good evening. Thank you for
16 the opportunity to testify regarding the proposed programmatic
17 environmental assessment/environmental impact statement
18 preparation notice as a requirement to prepare an EIS for the
19 Hawai'i Interisland Renewable Energy Program or HIREP - Wind
20 on the islands of O'ahu, Maui, Moloka'i and Lana'i. My name
21 is Victor Reyes and I had the privilege of serving as County
22 of Maui Energy Commissioner. In that capacity I had the
23 opportunity to observe the development of events leading to
24 this hearing. Not much, though.

25 As the title suggests, a programmatic approach

1 indicates addressing issues impacting a plan or system under
2 which actions may be taken towards a goal. In this regard and
3 after review of the document in the preparation notice, I
4 would like to point out areas that appear to be or have been
5 overlooked for inclusion in the proposed preparation of the
6 EA/EIS.

7 I agree and support the concept of interisland cable
8 to be able to harness and deliver vast amount of renewable
9 energy in Maui County to where it is needed and would rephrase
10 the use of fossil fuels, the goal of Hawai'i Clean Energy or
11 HCEI. Maui County recognizes the same resources and has
12 similarly established the same goal through the Maui County
13 Energy Alliance. Maui wants to be energy self-sufficient,
14 too, just as much as O'ahu and the rest of the islands.

15 The program is looking at the three islands of the
16 county and, therefore, should include not only Lana'i- and
17 Moloka'i-based wind, but also Maui-based wind and should
18 consider other forms of renewable energy generation such as
19 PV, geothermal, biomass and others. Furthermore, proven
20 energy storage and control technologies for integrating
21 various energy schemes or energy generation schemes are
22 available and will be more advanced and capable in the future.
23 It is noted that among the items considered by the proposed
24 action is the socioeconomic impact of project development.
25 For these reasons, the program should be called HIREP - Wind

1 Plus.

2 The interisland cable should be designed to
3 interconnect O'ahu, Maui, Lana'i and Moloka'i. I add that
4 because during the initial discussions we've heard that Maui
5 will be interconnected if done on Phase 2. We want it clear
6 that the islands will be interconnected simultaneously.

7 The program should establish a broad spectrum, a
8 broad spectrum -- Sorry. The program should establish a broad
9 spectrum consultative council for broader and deeper community
10 inputs. The program should be inclusive and enhanced by
11 consider spreading the economic benefit to the wider segment
12 of the community by allowing participation smaller generation
13 and/or related projects. The program should incorporate a
14 levelized electric rate for O'ahu, Maui, Lana'i and Moloka'i.

15 Thank you for your consideration.

16 MS. CHANG: Thank you very much. Mr. Reyes, would
17 you like -- could you leave your testimony as well?

18 MR. REYES: I will be submitting it, e-mailing it.

19 MS. CHANG: Okay. Excellent.

20 The next person is Warren Shibuya and then after
21 that DeGray Vanderbilt.

22 MR. SHIBUYA: Aloha, members of the US Department of
23 Energy (DOE), State DBEDT and AECOM consultants developing the
24 programmatic environmental impact statement, County Members --
25 Council Members Baisa and White, and MECO President Jackie

1 Hart.

2 I'm a Maui County volunteer and Maui Planning
3 Commissioner, Maui Energy Alliance member and General Plan
4 Advisory Committee member. I also benefit from a 6.9 kilowatt
5 home photovoltaic system since 2004. I strongly support
6 Maui's efforts to exceed 70 percent 2030 Hawai'i Clean Energy
7 Initiative goals. I know I cannot solve world hunger, but I
8 want Maui and all Hawai'i attaining 80 percent renewable power
9 sustainment ASAP. I assure O'ahu listeners that I am
10 breathing clean, fresh Kula, Maui air and I am not
11 hallucinating. I was 2003 drafter of Governor Lingle's July
12 2004 Executive Order allowing Hawai'i's neighbors installing
13 renewable power generating systems.

14 Installing huge wind-power converting systems on
15 neighbor islands which are interconnected to O'ahu via
16 undersea cable is more than hallucinating, it is exploitative
17 of neighbor island resources to benefit O'ahu customers.
18 Leveling electricity and fuel costs for neighbor islands for
19 equity and fairness are paramount conditions before O'ahu
20 consumers benefit from any neighbor island resources.

21 First, O'ahu has not increased using land areas to
22 generate both kinetic and radiant energy. O'ahu has large
23 shopping, businesses, home, condo and apartment roof areas
24 lacking PV arrays. O'ahu has not used mountain and hillsides
25 to capture and convert wind power.

1 Absent any significant on-island renewable power
2 generating initiatives, except DoD initiatives, O'ahu lacks
3 justification for exploiting neighboring island renewable and
4 sustaining land potentials. Show me today an analytical plan
5 demonstrating O'ahu's renewable energy potentials, commitments
6 and contributions for renewable power. Lacking any quantified
7 analysis, do not tell me reasons why O'ahu cannot expand their
8 renewable energy production footprint. Further, O'ahu should
9 not be immune to HCEI penalties for failing 70 percent minimum
10 conservation and 2030 sold renewable power. Their failure
11 should not penalize non-O'ahu grid consumers and renewable
12 power contributors.

13 Second, population growth, new housing developments,
14 expanded transportation infrastructure and economic
15 developments require additional renewable power. All new
16 housing developments and State facility CIP projects, as a
17 minimum, should have at least 70 percent of power generated by
18 renewable systems to comply with HCEI goals.

19 Third, undersea cabling systems are existing
20 technology, whether DC or AC carrying systems. However,
21 proposed undersea cabling interconnecting islands are proposed
22 lying and anchored through fishery Penguin Banks and Marine
23 Wildlife Sanctuary, managed fishery and mammal protected
24 waters.

25 Fourth, Maui grid has a mixture of renewable power

1 generated by burning baggasse and imported coal, wind and
2 photovoltaic converting systems. This is an ideal engineering
3 environment, lowest economic risk for managing interconnected
4 renewable power from Lana'i and Moloka'i connected to Maui
5 grid and leveling/equalizing power costs.

6 On a grid management note, several DBEDT members
7 participated in a Maui-Sandia National Lab group in developing
8 a dynamic simulation model for Maui or a single grid system.
9 This dynamic electrical model is expected to characterize
10 impacts of added wind, PV, hydro, ocean kinetic, ocean thermal
11 and geothermal systems, along with added batteries, capacitors
12 and flywheel energy storing systems, coupled with SMART Grid
13 initiatives for increased grid efficiencies and effectiveness.
14 Sandia presentation of drafted dynamic simulation model is
15 expected next month.

16 Fifth, a total interisland energy interconnect plan
17 serving all Hawai'i energy consumers must be presented. The
18 EIS should not be parceling single leg undersea cable phase.
19 This myopic and O'ahu-centric type of study does not support
20 stated all Hawai'i mission and HCEI. As a minimum, undersea
21 cabling route and ocean environment impacts should include all
22 channels between populated Maui Nui islands.

23 Total all Hawai'i energy view is imperative.
24 Lacking this entire Hawai'i energy view, we get current
25 disproportionate gasoline and diesel fuel price differences

1 where Maui, Moloka'i and Lana'i consumers pay
2 disproportionately higher prices than O'ahu consumers for
3 these energy products. There should be no reason for O'ahu
4 consumers not sharing in added transportation costs to
5 equalize all fuel prices throughout Hawai'i.

6 Also, please try to inform the Maui Planning
7 Commission for their inputs, because if you are going to make
8 some improvements in coastal areas, SMA is their kuleana.

9 Mahalo for your time and including my points in the
10 draft EIS.

11 (Applause.)

12 MS. CHANG: Thank you, Mr. Shibuya. Would you like
13 to leave your statement?

14 MR. SHIBUYA: I already have.

15 MS. CHANG: Okay. Next is DeGray and then after
16 that Beverly Zigmond.

17 MR. VANDERBILT: Aloha, everyone. My name is DeGray
18 Vanderbilt. Dawn asked to us spell our name. It's kind of
19 difficult and I don't want to embarrass myself, so I'll just
20 move on with my testimony.

21 Early in the evening I heard one interesting
22 comment: There's a lot of wind on Maui, Moloka'i and Lana'i,
23 but there's not much on O'ahu. Well, the reason is pretty
24 obvious. There's so many people over there it's blocking the
25 wind, so you've got to cut down on the number of people. And

1 when we're talking about people, I think -- it just seems we
2 went through a -- and we're still going through a horrible
3 economic time. And people were living beyond their means and
4 everything was easy and everything was cheap and nobody took
5 care, they were just living for today. And now we're starting
6 to recover out of that. The stock market is back up over
7 12,000 points. Everything starts to look exactly rosy and now
8 we're going for cheaper electricity at the expense of some
9 other places just so people can live a careless lifestyle.

10 So at some point, at some point we've got to tell
11 people: Live within your means. People are very wasteful,
12 especially on O'ahu, and that's got to stop. We just can't
13 keep feeding this big elephant with our trillion dollar debt
14 and everything else. We're just going to go down the toilet
15 in a few years. So I thought that this last economic downturn
16 would be a wake-up call for people.

17 You start going undersea with cables, something
18 happens, the electricity goes out; people on Moloka'i aren't
19 going to care, but people on O'ahu will die. So what I'm
20 trying to say is: Let's look at some economics of this thing.
21 Nobody talks about specifics. We're not supposed to talk
22 about specifics. Well, how can you talk about the impacts if
23 you don't have any specifics to talk about? But there's just
24 so much -- so much cost involved in this thing and how is that
25 going to relate to rates?

1 And we just need to get some specifics because
2 Moloka'i was put in a turmoil a couple of years ago. Governor
3 Lingle came out with the Hawai'ian Electric president, the
4 head of First Wind, Mr. Saunders from Lana'i Company and said,
5 We're going to give 400 megawatts; 200 to O'ahu -- 200 to
6 Moloka'i and 200 to Lana'i. And if one or the other can't
7 handle, the other one gets the whole thing. Well, Lana'i
8 wants the whole thing and now we're talking about 400
9 megawatts, but now Maui is in the mix.

10 So this has been going on for two years and you just
11 rope-a-dope the public who comes out here on pro bono basis.
12 I mean, it's nice that you folks from Washington came out,
13 it's probably a pretty big expense, but these meetings are
14 just really tough to get your arms around because there just
15 aren't many specifics.

16 And I think that we've got to start looking at sort
17 of a sliding scale on rates. I mean, for water -- for
18 instance, on water here, there's people in lower income
19 families, people that are concerned about the environment that
20 take care of not using too much water. They might use 300,
21 400 a day. Some other folks in some of the nicer areas are
22 using 5,000 gallons. So when we have a 10-percent cut, the
23 guy with 5,000 just goes down to 4,500, that's not much; but
24 10 percent off the guy with 400 or 300, that's a lot because
25 he's right on the edge there. So like with the electric, they

1 should penalize the people that are abusing the use of energy.
2 And with the water, they shouldn't cut the guy with 400
3 gallons a day at all until the guy with 5,000 lowers his rate
4 to 400 gallons a day. Then everybody is on an equal scale.

5 But this is something -- the social impacts of this
6 are great and because the people with money can pay, no matter
7 how wasteful they are, and -- but the people that are being
8 asked to live within their means, they've got a tough time.
9 So hopefully --

10 I just want to say one other thing. I hear that the
11 big landowner that has some land that was going to be the wind
12 farm on Moloka'i, it's on the map there, he attended -- Mr.
13 Peter Nicholas attended the O'ahu meeting, I don't know
14 whether he said anything or not, but he's come out on Moloka'i
15 and said he's against the wind energy. Here's a man with a
16 company that left Moloka'i hanging in the balance, terminated
17 all the employees and went back to Malaysia and they have
18 10,000 acres that they pay the County less than a dime a year
19 in property taxes. So if you want that land, whoever you
20 State guys are out here, just go and condemn it. I mean, he's
21 just out there taking advantage of the whole thing. And --

22 But Moloka'i survives. They asked me to come down
23 to the meeting tonight and try to find out what's happening.
24 Of course, you all are going over there tomorrow night and
25 Dawn said she's meeting at Mitchell Pauole Center at 6:00.

1 Well, the Land Use Commission has a big meeting at Mitchell
2 Pauole Center at 5:30. So hopefully you guys can work that
3 one out.

4 But, anyway, I really -- I'm glad I didn't have to
5 get into the good, solid analytical information, so it's
6 really great to follow Warren in the testimony. So thank you
7 very much.

8 (Applause.)

9 MS. CHANG: Thank you, DeGray.

10 Beverly, and then after Beverly we have Dick Meyer.
11 Mayer. Thank you.

12 MS. ZIGMOND: Good evening, everyone. My name is
13 Beverly Zigmond and I live on the island of Lana'i and have
14 lived there for almost 20 years. Thank you for the
15 opportunity to say my piece tonight.

16 I, like many other people -- and this is in direct
17 contradiction to what the gentleman before me said -- we
18 oppose the wind power generating plant on Lana'i for many
19 reasons. The gentleman before that, I think his name was
20 Warren, mentioned exploiting the neighbor islands. I call it
21 raping Lana'i. It would be 25 percent, that's one quarter of
22 our island. And in return they said we might get 20 jobs at
23 the end. What about all of the endangered species? What
24 about all the cultural sites? No, we're not for it.

25 Irene Bowie and I must be on the same wavelength

1 because I have a lot of the same points on this EIS that she
2 had mentioned, but I am going to take the time to reiterate
3 them because I think they're very important.

4 Number one, the federal and state environmental
5 impact laws require a study of alternatives. Hmmm. I read
6 the whole thing. I saw big wind and no action. It's not
7 quite alternatives to me.

8 The second point that just also boggles my mind is
9 the fact that DBEDT is the applicant and the accepting
10 authority. This just -- my humble mind just can't wrap itself
11 around there. There seems to be a huge conflict of interest
12 there.

13 The document itself does not talk about the cable
14 issues. Who is going to own it? I think we need answers to
15 some of these things.

16 How much money is it really going to cost and how is
17 it going to be paid for?

18 They talk about decommissioning. They kind of just
19 gloss over that. Well, these things, from what I understand,
20 have 60-foot diameter holes. That's like the size of three
21 double-decker buses. So we have to take all this dirt out for
22 170 perhaps, where is that dirt going to go? What's going to
23 happen when we decommission? And something that I didn't see
24 anywhere at all is where are we going to get the water to make
25 the cement, something like 1,100 cubic yards of cement? We

1 don't have that kind of water. Nobody mentioned that
2 anywhere.

3 I also agree that O'ahu has to conserve. That
4 wasn't spoken about in this report. The Booz Allen report on
5 the financial implications, as taxpayers we probably paid for
6 that, I would sure like to get a look at that.

7 What about the Kanepu'u Dry Forest Preserve? What
8 about all the cultural and archaeological sites? The study
9 talks about, quote, "limited field studies of the impacted
10 area." So like what does that actually mean? Are we just
11 going to like read through the literature, or are we going to
12 have somebody out there doing a major analysis?

13 And what happens if Moloka'i decides they don't or
14 can't participate? Are we going to get all 400 megawatts,
15 raping us just a little bit more maybe?

16 And then there's that billion dollars of our state
17 money. Hmmm. Think we can put something like 166,000 homes
18 on O'ahu with solar hot water and just 28,000 with
19 photovoltaic and I'm sure there's a whole lot more.

20 These things are 410 feet tall. That's as tall as
21 the highest building on O'ahu. One quarter of our island.

22 And then there's the profit thing. The developer,
23 who is a mainland developer, it's estimated 150 to \$200
24 million annual profit. And so generously we recently heard
25 Lana'i might get 1 percent.

1 I ask you to look at these things, please. Really
2 appreciate it. Thank you.

3 MS. CHANG: Thank you. Our next speaker is Dick
4 Mayer and then Sean Lester.

5 MR. MAYER: Aloha, visitors and neighbors. What I
6 would like to do is just go through a lot of items. And if I
7 take too long, I'll have to come back later, but let me just
8 start.

9 The first issue is one that has been referred to
10 already and that's the question of economic and environmental
11 justice. By putting up this facility on the neighbor islands,
12 Lana'i and Moloka'i in particular, the energy going off to
13 O'ahu which will receive all of the benefits, I would like to
14 see a very thorough analysis of how the people on Lana'i and
15 Moloka'i can benefit by this project economically,
16 employment-wise, lower rates, any other type of benefits.
17 That should be a comprehensive analysis, a very comprehensive
18 analysis. There should be proposals in there how they can
19 actually benefit in the rate structure, in some of other
20 mechanism so that the benefits will accrue equally or even
21 more so to the people who are paying the costs.

22 Another issue is that of wheeling. This is
23 something that's come up before the PUC on their dockets, and
24 that is that if the system were to be set in, if cables were
25 to be set in, the question that would come of who would be

1 allowed to send electricity through that cable. And, for
2 example, could Maui County install some of those windmills on
3 Lana'i and use that to transmit power to Moloka'i or Maui, for
4 example, I'm just giving an example here, to run all the water
5 pumps and the sewage pumps. This would be a very good use of
6 electricity. And so they should be able to use it. It should
7 not be something operated by Hawai'ian Electric. That should
8 be the last entity that controls the grid, as they now do, but
9 it should be opened up so that any entity, a County entity, a
10 State benefit, a private entity would be able to wheel the
11 power through it. So that should be examined in the system
12 and discuss how the PUC can go ahead and implement this
13 because right now in Hawai'i we do not have that wheeling
14 concept.

15 I would also urge you to take a look at the Maui
16 General Plan. I just took a quick look at one part of the
17 general plan that's been adopted and this is already law in
18 the county, and that's the Countywide Policy Plan where there
19 are 29 references to the word "energy" in that plan. One of
20 the concepts that's in there is economic self-sufficiency.
21 And that's economic self-sufficiency for the county of Maui,
22 not for the state of Hawai'i. And so the question should come
23 up: What could be done to set the system -- forget O'ahu
24 entirely so that this would be a tri-island -- or maybe some
25 day have Kahoolawe integrated into it, but a system that would

1 make Maui County self-sufficient. For after all Maui people,
2 Maui Island people are paying higher electric rates than O'ahu
3 and certainly Lana'i and Moloka'i are paying much higher
4 rates. What can be done to benefit the people of Maui Island
5 first before O'ahu. And what would be done? Because Maui
6 Island's projected to grow -- I would hope you would be
7 looking at the population growth figures, the urban growth
8 boundaries and other figures that are in the plan. Obviously
9 I still am the vice chair of Maui Island's Long Range Plan,
10 the General Plan Committee and we have a lot of numbers in
11 there that you need to examine.

12 There's a question of approval. You mentioned the
13 state and federal EIS process. What you didn't talk about is
14 what about the County of Maui's approvals and what needs to be
15 done there? And here we have community plans: Lana'i has its
16 own community plan, Moloka'i has its community plan, the
17 island of Maui has its community plan. Wherever this cable
18 were to go, there would have to be a community plan amendment
19 to accept it. There would be zoning questions where that
20 would happen and there would also be SMA and CZM, coastal zone
21 management issues that would need to be resolved within Maui
22 County. And that's a very comprehensive analysis that needs
23 to be incorporated into the document.

24 Then there's a question of segmentation, which is a
25 major issue. What you have done is you've had this project

1 that will be only looking at the cable, but will not be
2 looking at any of the wind operations or conceivably other
3 entities that may be tying into this cable once it's built;
4 solar, geothermal, OTEC or whatever else may go into the plan.
5 And you'll need to look at the integration of all of those
6 elements together. By doing it the way you're doing it and
7 having it segmented out, you're violating I think NEPA and
8 Hawai'i also environmental regulations by doing a portion of
9 it, not allowing people to comment on the overall impact of
10 the document. And you may have to reexamine the whole
11 premises for this analysis that you're going through because
12 what you're doing is segmentation, which I think the courts
13 have argued that you cannot do. Especially since you know
14 that this is only one step in a much larger project.

15 Then there's the issue of storage. As part of the
16 integration of these units there will be a shifting of
17 electricity. We all know that wind is not a fixed source. It
18 may also eventually tie in with solar and whatever. What will
19 be done to store electricity for those times when the wind is
20 higher and allow that backup power to go. I would like to
21 indicate one possible use of that storage and that is the
22 integration of automobiles into the technology. Automobiles
23 could be run and stored in the batteries during the -- and
24 have electric vehicles store them at night, store them on off
25 hours, perhaps give concessional rates and you'll have a very

1 large storage system. That's just one possibility, but that
2 has to be integrated into this analysis.

3 Another one that was just mentioned by the lady
4 prior to me from Lana'i is water. I'm familiar with the
5 construction of these sites and I know that large, large
6 quantities of water will have to be utilized to build -- to
7 get the cement. And you're building in very dry areas. There
8 may be a lot of wind, but there's not much water, so you have
9 to account for where the water will come from, what effect
10 that will have on the aquifers and on the existing residential
11 communities, on farmers and whoever else you're taking that
12 water from as you build the wind system. You can't just build
13 the cable and assume that it won't have any effect on water
14 use.

15 There will also be the question of truck routes.
16 These are remote areas. You'll be using very heavy equipment
17 to get out to these sites for construction purposes. You'll
18 need to have probably new roads built, you'll have to have,
19 you know, the ability to fuel these trucks, perhaps
20 incorporating new fuel depots, et cetera. So the whole
21 development of truck routes to develop this will have to be
22 discussed.

23 Land titles, land titles are an important issue in
24 Hawai'i. There's a lot of controversy as to who owns the land
25 and there should be a thorough investigation to make sure that

1 whatever lands are to be used where you come ashore and where
2 the windmills will be, those land titles have been researched
3 well and documentation is there and it becomes very clear that
4 you have the right to do what you're going to be doing.

5 Noise, the windmills create a large amount of noise.
6 Will they in any way affect residents in that particular area?
7 Will they somehow be compensated? Will they get increased
8 benefits because of the noise from these windmills? Will
9 construction go on at night, which means lighting. And what
10 effect that will have on birds and other wildlife in the area.
11 There are a number of bird species that are guided by lights
12 and it could be very dangerous, especially since some of this
13 construction will be done on the shoreline where there are
14 birds coming ashore and could be misled by lights. Perhaps
15 even turtles.

16 There's another -- Do you want me stop and let
17 somebody else go?

18 MS. CHANG: How much longer?

19 MR. MAYER: I have another five minutes.

20 MS. CHANG: Why don't you go ahead and finish.

21 MR. MAYER: Okay. Projection viability, economics.
22 There should be a thorough analysis of the economics of it
23 because we need to know who will pay if this thing doesn't
24 achieve all the benefits that are supposed to be there. Will
25 the taxpayers of the state be obligated? Will private

1 investors be obligated to pay up the thing? So there should
2 be a thorough analysis and that would also include an
3 ownership model, giving perhaps some analysis of various
4 ownership models State, private, State and County, owned by
5 people on an island. Perhaps the people on Moloka'i or
6 Lana'i, as an example, might want to be the owners of this so
7 they will make the decisions on this rather than the people on
8 Honolulu. And a thorough analysis of the cost benefits. I
9 think that's absolutely critical in this analysis. It
10 shouldn't be just taking a look at the physical and cultural
11 environment, but also at the economic cost and benefits in
12 toto.

13 What is the reliability of the system? It's one
14 thing to say that this -- once its built will be there forever
15 if every ten years or every 20 years or whatever number of
16 years the cables will have to be replaced, the windmills have
17 to be replaced. That should be factored in and we should be
18 aware of those things because that would mean at some future
19 date there will be, A, have to be the disruption for more
20 construction and replacement and possibly unreliability
21 issues, et cetera.

22 Electric rates should be thoroughly analyzed. Right
23 now we all know that O'ahu gets the cheapest rates, Maui the
24 second and Lana'i and Moloka'i pay very, very high rates.
25 What will be done to the rate structure? What will be done to

1 conserve electricity that could be built into the rate
2 structure? Are there any proposals that could be made in this
3 project?

4 Employment. The lady mentioned that Lana'i might
5 only have 20 jobs. Very often projects like this are made to
6 look very good by saying, Oh, this is a \$4 billion
7 construction project. Well, of the \$4 billion, 3.5 billion is
8 used by windmills from the mainland and cables from the
9 mainland. That doesn't help the employment issue here in the
10 state so I need -- you need to put in what will be the
11 employment impact locally. Local jobs, not looking at only
12 employment nationally. That's not going to help people here.

13 Those are most of my items and I thank you very
14 much.

15 MS. CHANG: Thank you.

16 The next speaker is Sean and then Keala
17 Kaopuiki-Santos. And Keala will be the last person that's
18 signed up, so if anybody else wants to speak, please sign up
19 and let us know.

20 Were you signed up? Okay.

21 MR. LESTER: Aloha. A lot of folks here I haven't
22 seen for quite some time. Nice to see you. My name is Sean
23 Lester, as most of you know. I'm a 24 -- 22-year full-time
24 resident of Maui. I live near Hana and came in specifically
25 to testify on the HIREP EIS. It's a pretty far drive, but

1 worth it to testify on a project that can foster extraordinary
2 good change for the future of our island and the state.

3 In 1999 MECO decided to build a \$400 million diesel
4 fire generating station in the middle of Maui. This happened
5 to be less than eight miles down the hill from my small farm
6 in Kula. The lack of foresight in regards to alternatives to
7 fossil fuel by the utility motivated my decision to become
8 involved in assuring that such a plant would never be built
9 and that alternative energy would have a future here in
10 Hawai'i. A dozen years later, after having served on Maui
11 County government and nonprofit boards, a whole lot of time
12 over on O'ahu trying to get the first 2020 taken care of, I
13 finally get to testify on what I consider a visionary project.
14 We have all fought and worked hard to have this become a
15 reality in one way or another. We hear different people
16 speaking different ways and hear a lot of fear, hear some
17 hope. The main thing is we want to ensure that it's well
18 vetted.

19 As we have fought and worked hard for whatever it is
20 that we're working to in reality and the underwater
21 interconnect is vital to seeing our energy future become more
22 like a real grid than hodgepodge of insulated island systems
23 that are highly vulnerable in many ways. If you look at any
24 part of the world now, underwater direct current cables are
25 being utilized to interconnect generation grids serving

1 millions of people. In western Europe alone there are 29
2 medium to large HVDC interconnects already being used, built
3 or under construction. What do the Europeans know that we
4 don't know? Maybe there's something there. These guys have
5 fought wars forever, they definitely don't speak the same
6 languages, but they do understand what happens when they also
7 don't interconnect.

8 This isn't rocket science. It's not something new
9 that has to be invented again. It's simply applying
10 technology that's available today and used worldwide. The
11 capacity to have such an interconnect between O'ahu, Moloka'i,
12 Lana'i and Maui would ensure the future capacity of our
13 islands to stabilize not only the energy of a single island,
14 but all of the islands together as a single network of energy.
15 Really important. We do that everywhere else in the United
16 States except here and there's a reason for that. In the
17 future our electric circuits which now feed the customers will
18 be sophisticated enough to buy and sell power coming from
19 circuits, alternative energy sources and utility power is
20 based on local neighborhood area island and statewide needs of
21 an island-to-island interconnected grid. Your house will be
22 able to make something that talks story with the guy next door
23 and all of you work together to sell something down the street
24 that's a little more to your advantage. That's what we're
25 setting up, an ability to communicate. It's like an

1 electrical phone system that we're basically setting up.

2 An example of a positive outcome of such a cable
3 would be the ability to directly interconnect to O'ahu and
4 Maui Island proper. I really want to just cut to the chase on
5 that. This is important. Our dynamics as an island
6 community, which means many islands together, depends on our
7 ability to work together. These systems regardless of whether
8 you go back hundreds of years or two years ago, we have to
9 find ways to work together. And there are major issues as to
10 why this is a good way to do it.

11 It's great to look at Lana'i and Moloka'i as places
12 for wind farms to grow; however, we have a very large area
13 here on this island that could generate a large amount of wind
14 for use statewide. Wind that cannot be built to due to MECO's
15 insistence on local circuit constraints. Please remember the
16 success of the first wind venture here on Maui. A lot of
17 people paid blood and guts to get that taken care of. A lot
18 of people sank trying to get it. And we've finally got a good
19 system and it actually works. It's up and running and
20 generating a great deal of energy. Maui itself has the
21 capacity to generate far more and an interconnecting cable
22 would ensure that wind generation is not discarded by the
23 utility because there's no local use for the power generated
24 on Maui at a time when the wind is blowing and the power is
25 available. And this happens every single day here on Maui.

1 There is wind that's able to generate to stop oil from coming
2 into the state and it's not happening.

3 Remember one thing: We're all interconnected in the
4 cost of fossil fuel. It's not just the cost of gas at the
5 pump. It's the cost in jobs and small businesses that fold
6 when oil goes up. Remember that, we all are hit by that. So
7 it's not just about Maui or O'ahu or Moloka'i. It's about our
8 ability to survive in a world that dictates how many Maui or
9 O'ahu citizens will have a job next month just due to the cost
10 one single commodity, oil.

11 Honestly, there can be no dependability of the
12 islands' infrastructure until some type of interconnect is
13 built. It can be very well -- it can very well be the basis
14 of a unified rate structure for statewide cost to consumers
15 instead of the extraordinary differences between islands as we
16 see now.

17 You can set the stage to help emerging technologies
18 utilize the intelligence of an interconnected system in a very
19 promising future. I hear OTEC and other standalone
20 technologies offered as an alternative. They are like apples
21 and oranges in regards to the cable. OTEC is a specific
22 technology with a great future. On the other hand, the
23 undersea cable is technology neutral in regards to what types
24 of alternative energy you're transmitting over the system.

25 And the transmission can go both ways in the future.

1 Imagine no need to build any more old technology systems. If
2 Maui or O'ahu or the Big Island as it's interconnected, which
3 hopefully it will be one day, has had somehow -- had someone
4 build a new technology that is significant, the technology can
5 be built on a larger and more economic scale without the
6 artificially applied restraints of local current low curves
7 which utilities zealously enforce. They tell everybody stay
8 small, stay small, stay small. It sounds familiar. We have
9 to deal with this all the time in other ways.

10 This is done between utilities all the time on the
11 mainland. Instead the power can be fed into an overall island
12 grid. This is done between utilities all the time on the
13 mainland at great advantage to the customers in cost and
14 reliability. If one generation system goes down, another can
15 pick up the load. Maui is quite vulnerable in this aspect.

16 Another point is the cable will allow a more rapid
17 expansion of renewable power. People who invest in
18 alternative energy look for system stability and the
19 availability of alternative markets for the power. This cable
20 simply makes alternative energy a better investment overall
21 than it is with isolated small energy grids as we have now.

22 Please help to ensure all the citizens like myself
23 that have done so much work get something that is of quality
24 and allow it to come to fruition. Give us the flexible and
25 forward-looking capacity such an investment and interconnect

1 will allow. It is really the chance of a lifetime to
2 accelerate the great thought of self-sustainability to the
3 next level. Thank you.

4 MS. CHANG: Sandra, do you need a break?

5 Okay. Sandra, the court reporter, she's needs a
6 break. She's been typing for over the last hour. So this is
7 an opportunity if anybody else want to speak, we're going to
8 take a little -- Five-Minute break, Sandra? Five-minute
9 break.

10 (Pause in Proceedings: 6:05-6:10)

11 MS. CHANG: Okay. We're going to reconvene. The
12 next speaker is Jocelyn Perreira and then after Jocelyn is
13 Keala Kaopuiki-Santos. And, again, if anybody else would like
14 to come up and speak, it would be -- if you could sign up. If
15 not, I'll just recognize you.

16 MS. PERREIRA: Aloha and good evening, everybody.
17 This evening I'm speaking for the Tri-Isle Main Street
18 Resource Center that has nine towns that we advocate for in
19 Maui County. We support reasonable renewable energy with
20 reasonable goals. We're here tonight to express our concerns
21 regarding the proposal that has been put forth. Our
22 organization having twin goals of economic revitalize within
23 the context of cultural and historical preservation and
24 advocating for these people on Lana'i and Moloka'i who have
25 contacted us expressing -- requesting help and we do request

1 that you honor their rights to home rule. They are part of
2 Maui County as our sister islands. We support the people of
3 Lana'i and Moloka'i to receive a just and fair proposal. A
4 proposal that clearly benefits every man, woman and child, but
5 also benefits every business and -- as a starting point, then
6 weigh the costs of the impacts and then do what is pono. The
7 benefit package is a far cry from reasonable.

8 Setting up the scope of EIS expresses -- concern has
9 been expressed about lacking specs. That's very true. It's
10 very hard to not get enough information to give specific
11 comments and we look forward to getting that. We feel you
12 must measure flavor, character and sense of place. How do you
13 measure that? Do you know how to measure that? Computer-
14 generated model is something that is the very least we owe to
15 these people.

16 Maui could not take this much power on because it's
17 larger -- the 400 megawatts, larger than our entire grid.
18 Maui has less than 300 megawatts. Moloka'i and Lana'i
19 together would be 400 megawatts. It is our understanding that
20 if one of the islands backs out, that means Lana'i gets all
21 400 megawatts. So have you looked at alternatives; solar,
22 photovoltaics and others that has been put forth?

23 We want to thank Warren Shibuya because he
24 articulated very well some of what we would want to say and
25 agree on.

1 Why can't this be done on O'ahu? Why not look at
2 conservation or look at generating power on O'ahu?

3 The order and the magnitude -- You can see the
4 Kaheawa site, 20 plus megawatts, that's visible to Maui. The
5 order of magnitude for Lana'i would be ten times. It will
6 absolutely change the face of the island.

7 Prior to any agreement, the EIS requirement should
8 be able to -- like I said generate the model. You should
9 consider cable damage to reefs, water to use and build and
10 operate the wind systems. They already have a tremendous
11 problem with water. Redesigning the harbor to accept the
12 blades and parts could result in barge delays and this is
13 where the residents get their food and goods and services.

14 The wind farm change -- will change the physical
15 environment. It will affect the birds. It's a bird killer.
16 It's a noise generator. To what degree? We need specific
17 information. It's physical impacts as well in looks and how
18 this island will be perceived and scarred.

19 Roads that will have to be built to get the turbines
20 and the equipment through. Will they haul it through the
21 city? They have to cut an entirely new roadway system,
22 scarring the land forever. Will there be -- where would they
23 put the in-fill dirt from digging the roads? In the
24 archeological sensitive gulches? We don't know. We need
25 specifics. Are you changing any of the natural drainage? How

1 does this affect the ocean? If you place wind farms on these
2 islands, if they become abandoned as such was the case on the
3 Big Island, what plan do you have to recover and return the
4 area to its natural state?

5 Impacts to sense of place when the local residents
6 resist making trips to the west side part that they are -- is
7 part of their everyday life experience, which is where they
8 currently have a wide array of recreational activities and
9 camping. The special view plains if you don't know that are
10 there that are unique to that island. The impacts to the
11 lifestyle if these areas are not available for hunting,
12 fishing, visiting cultural Hawai'ian heiaus and one of the
13 most beautiful beaches. It would be too hurtful for residents
14 with Lana'i in their heart to look at the price they're paying
15 to benefit O'ahu when they see their topography and landscapes
16 forever scarred.

17 Living on Lana'i is a choice. Lana'i is critical to
18 preserving Hawai'i's vanishing lifestyle. Many of these
19 people cannot come out publicly to speak because they are
20 intimidated and they are fearful for their jobs and for the
21 homes that they rent. Community values are important here.
22 Is there a cleanup plan? Someone must document what is there
23 now. Support environmental nonprofits' efforts to do
24 maintenance of erosion sites. The benefit package makes O'ahu
25 look like the cookie at the top of the jar, leaving our

1 beloved Lana'i and Moloka'i the crumbs at the bottom of the
2 jar.

3 Update the Lana'i powerplant so that the solar farm
4 already on Lana'i can feed into the grid to start immediate
5 cost savings to residents and businesses. They were promised
6 this and yet they don't see this happening. With the same
7 amount of money you could put photovoltaic and solar panels on
8 each island and O'ahu homes and it will not cost the \$2
9 billion.

10 Make O'ahu prove that they have studied and tried to
11 implement alternatives or even tried conservation. They
12 already have a horrible trash dumping situation. Please don't
13 let them trash Lana'i or Moloka'i. It's unique in all the
14 world. Its genuine integrity is irreplaceable and priceless.
15 Once it's gone, it's gone.

16 Get real. A fair deal is important to all -- taking
17 up -- all of the above into consideration. How about real
18 money going towards technology for schools? Real money to pay
19 their utility bills? 250 to \$600 a month cost savings to
20 families and small business will help local families invest in
21 their own community, in its local businesses, services and
22 even eat in local restaurants. Economic benefits to all.

23 Destroying a quarter of the island of Lana'i for ten
24 percent energy to O'ahu is not reasonable. Come to the table
25 with an honest and fair benefit to Lana'i and Moloka'i and

1 then let them hash it out and let them decide. They are the
2 ones fortunate enough to have the resource. How dare
3 everybody jump on board to exploit it?

4 Letting the cable drive the size of the wind farm to
5 (inaudible) means justifying the need for an enormous wind
6 farm. Lana'i residents take all the impact, significant and
7 long-term benefits to O'ahu. It is not clear who pays for the
8 cable, the transmission line. The price on O'ahu goes up a
9 bit to maybe one billion. O'ahu, that is too sweet a deal.
10 Benefits to people on O'ahu will increase over time. The
11 burden on Lana'i severe with dropping value. What about
12 hunting and safety issues? This project does not create many
13 full-time jobs, approximately 20. A slug of money through the
14 initial construction bringing in people outside of Lana'i,
15 insult to injury, from O'ahu. Impacting on housing,
16 restaurants, et cetera, drug use, et cetera. Few maintenance
17 jobs to remain. A wave of money to pass through. Employment
18 is not a long-term benefit.

19 Statewide we have trapped ourselves setting a high
20 percentage of goals on renewables. Different groups have
21 ratcheted up percentages to achieve 40 percent to come from
22 renewables. Wind project is the only way to meet that
23 percentage quickly. There is pressure, with capital letters,
24 for wind farms so that the projected goal is not a failure.
25 Without a wind farm, you needs tons of solar and this has

1 opened the door for opportunity for these kinds of deals.

2 So we ask that you should honor the requests of the
3 people, the people of Lana'i and Moloka'i that ask for
4 alternatives for O'ahu energy first. Fair and equitable.
5 What do Hawai'ians know that many have forgotten? The value
6 of our home. If we do not have community values, we cannot
7 value our communities. Thank you.

8 (Applause.)

9 MS. CHANG: The next speaker is Keala and then Isaac
10 Hall.

11 MS. KAOPUIKI-SANTOS: Aloha mai kakou. My name is
12 Keala Kaopuiki-Santos and my 'ohana has lived on Lana'i for
13 over a hundred years. I spent my early childhood on Lana'i
14 and although I no longer reside there, I still consider it
15 home.

16 Let me start out by saying I support alternative
17 energy, but when it comes to a wind farm on Lana'i, I think we
18 need to look at other alternatives. I understand the need to
19 reduce our reliance on fossil fuel, but should it come with a
20 \$1 billion price tag, 170 massive turbines built across 22,000
21 acres of land and an expensive undersea cable?

22 With that being said, the following are a few
23 concerns that I hope will be addressed in the environment
24 impact statement. Will the current dirt roads that lead to
25 the prime fishing, diving and cultural sites of Polihua,

1 Awalua and Kaiena still be accessible? Will beach access
2 continue to be ensured?

3 In the digging of the 170 holes for these giant
4 turbines, what will become of the excess or displaced dirt?
5 How will the possibility of runoff be managed? Will the reef
6 and shoreline and the surrounding area be affected by runoff?
7 Polihua is also a famed turtle nesting spot dating back
8 hundreds of years. Will their nesting habitat be altered?

9 Will hunting and fishing rights within the proposed
10 22,000 acre area be limited? While the majority of families
11 no longer subsist on hunting and fishing alone, it is a way of
12 life for many on Lana'i. Will access to the area immediately
13 surrounding the turbines be restricted as it is at the Kaheawa
14 wind farm here on Maui? How will the numerous cultural sites
15 within the proposed wind farm be preserved and will they still
16 be accessible?

17 How will marine life be affected by the building of
18 undersea cables to transfer energy to O'ahu? What will the
19 impact be on marine mammals since the cable runs right through
20 the Humpback Whale Sanctuary? Will bow access and fishing in
21 these areas be restricted during the laying of the underwater
22 cable and afterward? Will the 170 turbines pose a danger to
23 the 'ua'u, the native petrel that nests on Lana'i? The
24 Kanepu'u Forest Reserve borders the proposed area and is home
25 to a number of threatened and endangered species, including

1 na'u, a native Gardenia. Are these plants in the neighboring
2 landscape of Keahiakawelo, Garden of the Gods, threatened by
3 the development of the wind farm or possible runoff?

4 When gathering information for the EIS please
5 consider the impact on the aina, the native species, the ocean
6 and the people for Lana'i is one of the few places where the
7 environment is still a huge source of leisure and recreation
8 and the cultural sites are still intact and undisturbed.
9 Mahalo.

10 (Applause.)

11 MS. CHANG: The next speaker is Isaac Hall and then
12 the last person that is signed up is Hokuao. And then, again,
13 if anybody else would like to speak after that, please let me
14 know.

15 MR. HALL: Good evening. My name is Isaac Hall.
16 It's all well and good to open a meeting like this with a
17 Hawai'ian chant, but the real test is the test of time and
18 that is how honest you state and federal agencies are with
19 these communities that they're dealing with. When they stand
20 up here and tell you this is not a specific document and that
21 they don't know where the cable is going to go and they don't
22 know where any of these wind farms are going to go and they're
23 discouraging you from coming up and presenting your specific
24 concerns, they're subverting the EIS process 'cause they're
25 discouraging you from doing exactly what you're supposed to be

1 doing in this process, which is to present your specific
2 concerns about this whole project. And I totally agree with
3 the new energy coordinator for the County, the whole point is
4 you give us the specifics so that the impacts can be
5 addressed. A programmatic EIS is intended to study the
6 cumulative impacts of every component of this project as a
7 whole in detail and with specificity particularly when you
8 know, the state and federal agencies, what the details of the
9 project are. And the project as whole are the wind farms on
10 the three islands, the cable, and the infrastructure on O'ahu.

11 The EIS PN that is the document that opens this
12 whole process is a disappointing document. It's disingenuous.
13 It pretends not to know a lot of information that you know is
14 known by these agencies. And I could hardly get past the
15 project summary. I'll just read you some of this. "Location
16 of the project: Island of O'ahu and Maui County." That's all
17 you know about the location? "Tax map key: To be determined
18 by project specific proposed wind projects." You don't know
19 where the Lana'i wind farm project is located? "Project site
20 areas: To be determined. State land use districts: To be
21 determined by project specific proposal wind projects. County
22 zoning: To be determined by project specific wind projects.
23 Special designations: To be determined by project specific
24 proposed wind projects. Required permits and approvals: To
25 be determined by project specific proposed wind projects."

1 And then the state official or the federal official
2 stands up and says, "We don't know where this cable is going."
3 And then I look at this document and I go, "Gosh, I remember
4 something in here way in the back. Oh, yeah. A map." Here
5 it is.

6 And then I remember something else 'cause we were --
7 went through this before. The State funded a study with our
8 money of alternative locations for the cable project. We
9 wrote a letter to the state DBEDT or whatever, said we'd like
10 to see a copy of this document where you studied the
11 alternative locations for the cable outside of the EIS
12 process. We'd like to see a copy of that document.

13 "Sorry. You can't see it." This is how public this
14 whole process has been.

15 And then they say, "Okay. We don't know where the
16 cable -- where it's going to come out of the ocean, where it's
17 going -- where the landing sites are." And I look on this and
18 I go, hmmm, that looks a lot like Kaneohe Marine Corps Base to
19 me. You know that's where it is, don't you? Right? Why
20 don't you just say? Or Pearl Harbor? You know where that is,
21 right, Pearl Harbor? Why the military locations, can you tell
22 me that? Are we going to have a discussion of why you picked
23 military locations for the cable to come in and out on O'ahu
24 or we just going to pretend that you don't know?

25 Then you say, "Oh, we don't know Maui, either."

1 Looks like Kahului Harbor to me. Is that where it is, Kahului
2 Harbor? So we can start to get to some specifics here.

3 And as far as Lana'i goes, they know in detail about
4 the wind farm on Lana'i. They know where it's going to be,
5 where all the towers are going to be, where the tax map keys
6 are, where the zoning districts are and everything else. They
7 know that already and yet they're going to tell you, "Nope.
8 This isn't specific. Let's not get into specifics. Oh, no."
9 There is an 'ua'u colony. "Oh, no, no. Don't tell me about
10 that because we're not going to study that." That's a sure
11 way that you're going to have to do a supplemental EIS at the
12 end of this whole process.

13 So study the impacts that you know about and don't
14 make us tell you what those specifics are when you already
15 know what they are.

16 MS. CHANG: Thank you.

17 Hokuao. Would anybody else like to provide
18 comments?

19 MR. PELLEGRINO: (Hawai'ian statement.)

20 Aloha mai kakou. I'm Hokuao Pellegrino. I'm from
21 the ahupua'a of Waikapu known for its gusty winds. Kaheawa
22 farm probably would not be in existence if it weren't for the
23 assistance of the wind from the ahupua'a that I reside in, the
24 Kokoaleo, which means strong gusts. I have a vast background
25 in cultural and natural resource management and I'm here to

1 share specific mana'o on the wind project pertaining to
2 Lana'i, believe it or not.

3 I'm married to a beautiful wife whose family is --
4 has long genealogical ties to the island of Lana'i, known as
5 Kaopuiki 'ohana. And my sister-in-law Keala came up and
6 shared some mana'o. And I feel it's my kuleana to come up
7 here and like how my wife has supported me for the water
8 issues that we've had here on Maui, I want to give my support
9 back to the island that her 'ohana has genealogical ties to.
10 Her family -- Keala was, I think, quite humble saying that her
11 family has been there for a hundred years. I think her family
12 has been there for much longer than that genealogically,
13 spiritually connected to that aina. Their grandfather's name
14 is Solomon Kaopuiki and he's still very much alive and well on
15 the island of Lana'i in his 90s along with his two sisters,
16 who are probably the most knowledgeable about Lana'i and their
17 cultural resources and environmental resources and the people
18 of Lana'i. If you don't know his name, I suggest you learn it
19 quickly.

20 Genealogy is very important to us because it's not
21 about a name, it's not about who our grandfather or great
22 grandfather was, but it's about understanding the history the
23 knowledge that comes down -- that comes down from each
24 generation. I have had the privilege for the last four years
25 to spend time on Lana'i with my wife and her family and her

1 grandfather and to have him take us around and share about the
2 important sites on Lana'i.

3 I am very much for renewable energy along with my
4 family. I myself, along with my wife's family, grew up in a
5 home that has been completely off the grid using solar
6 photovoltaic panels. I drive a hybrid. I look at the wind
7 farm every day I go to work and as I go down to Lahaina or
8 Kihei and so on. And I had some challenges when that project
9 first came up, but I came to realize that it was quite
10 beneficial to our island and to realize that that energy was
11 going to be utilized here on Maui.

12 When I started to look into about a year ago what
13 might possibly happen to Lana'i and the ahupua'a of Ka'a,
14 which is the largest ahupua'a of the 13 ahupua'a on the island
15 of Lana'i, it concerned me because the ahupua'a of Ka'a is
16 roughly between 20 and 22,000 acres. The ahupua'a of Wailuku,
17 which we are currently in right now, is just a few thousand
18 acres more. And the proposed wind farm site in the ahupua'a
19 of Ka'a almost encompasses that entire area. So could you
20 imagine this whole area of Wailuku being covered in windmills?
21 Imagine what that would do to the cultural landscape, to the
22 viewscape and everything else.

23 I can understand the renewable energy initiatives
24 that we need to take here in the state of Hawai'i and I
25 support that, but not at the cost of so many different

1 resources. And I would like to speak specifically about the
2 cultural resources tonight because that is my background. I
3 would love to speak, as Mr. Shibuya did, on all the specific
4 and systematic approaches and so on, but that's not my
5 background. So I have very specific concerns about the
6 cultural impact that will occur.

7 Now, if you're familiar with the Ka'a ahupua'a, the
8 Ka'a ahupua'a is a very dry region similar to the leeward
9 regions that we have on the Haleakala slopes like Kahikinui
10 and Kaupo and Hana'ula as well as part of the Moku of Kula.
11 Now, if you're familiar with the dryland or dry regions of
12 each island, some of the most rarest of Hawai'i's native
13 species fall in these areas. It is why the Leeward Haleakala
14 Water Shed Partnership does what it does in protecting the
15 ahupua'a of Hawai'i in the Kahikinui Moku because nowhere else
16 on this island has as much biodiversity in terms of its native
17 species of plants and animals than that particular area. And
18 you could very much say the same for Lana'i and the ahupua'a
19 of Ka'a.

20 Earlier -- I was going to say earlier this year, but
21 it's 2011. In March of 2010 my wife's grandfather was honored
22 at the dryland forest of Kanepu'u because it was he that
23 helped preserve the Gardenia Brighamii which is also known as
24 the na'u. The only place that the native Gardenia can be
25 naturally found is in this area on Lana'i in the ahupua'a of

1 Ka'a in the forest reserve of Kanepu'u. Amongst the na'u
2 there are lama, olopua, kuaika, aalii and a vast number of
3 native species that are also found outside the reserve. And
4 I'm worried, I have deep concerns about how the natural
5 habitat will be affected in those areas alongside the cultural
6 resources. A lot of times when you go to different cultural
7 sites -- and we're not speaking particular of heiau. Many
8 times when you come to situations like this, you have a lot of
9 people speaking about heiau and the very sacred, sacred sites.
10 But to me as a farmer -- that is my background. I'm a kalo
11 farmer -- sites like dryland agricultural systems are very
12 important. Waikapu, where I'm from, had the largest dryland
13 agricultural system on all of West Maui. Ka'a, interestingly
14 enough, in the Ka'a ahupua'a of Lana'i also held the largest
15 dryland agricultural system of that island.

16 Now, if you know, if you're familiar with Lana'i,
17 water resources are very slim. Monolea is one of the only
18 places you will find water resources. How did the people, how
19 did our kupuna survive on that island for almost a thousand
20 years? It wasn't by growing kalo. It was growing uala and
21 they formed mala, vast tracks of mala. And I wish I could
22 bring up the book that I bought in the back done by Kepa Maly,
23 a cultural resource specialist on Lana'i, that has a
24 photograph from the early 1900s one of the only photographs
25 that shows the remnant dryland field systems of farming uala

1 or sweet potato in the ahupua'a of Ka'a. It's beautiful. You
2 can see mounds and mounds of uala for as long as you can see.
3 The picture is about this big, so it wouldn't help if I
4 brought it up. But these particular places and the cultural
5 sites and the environmental resources are very important.
6 They may not be utilized as they once were, but like Keala and
7 others have spoke, one of the best -- it's like going to a
8 Bishop Museum with no walls when you go to Lana'i where the
9 artifacts are just laying upon the ground. And the artifacts
10 are those agriculture sites, the dryland agricultural systems,
11 the heiau, the walls, the trails. And the people of Lana'i
12 know these very, very well.

13 I'm concerned that by building the wind farm in this
14 particular area is going to more so obliterate these
15 resources. Because the resources, the natural and cultural
16 resources are so rare throughout Hawai'i, why not leave a
17 particular area such as Ka'a on the island of Lana'i to be a
18 model to show what once was, the way our kupuna were truly
19 sustainable. Why not go back to those lands and look at food
20 security and redevelop those dryland field systems that once
21 fed the island of Lana'i?

22 I'm also concerned specifically regarding the CIS or
23 the cultural impact statement. I have seen too many times
24 people in -- people in my lahui, our lahui, our Hawai'ian
25 culture to sell out and to come forward and do these CIS's

1 because of their -- their own fame. And I don't want to see
2 this happen with this particular area. Because whether it's
3 going to be impacts on Maui, Lana'i or Moloka'i, I don't want
4 to see a mainland firm come in and do the cultural impact
5 statement. I also don't want to see one firm in particular
6 come and do that, because there are people and resources on
7 the island of Lana'i who are very well versed in doing these
8 particular things. I don't want to see somebody from Maui
9 going over to Lana'i and trying to understand what those
10 resources are when there are people right there that will be
11 able to do it.

12 This idea of this O'ahu centric mentality that rapes
13 the resources of our outer islands is not something that I
14 support. On Lana'i, on Moloka'i and Maui we still have the
15 potential to be completely self-sustainable. You could put a
16 few windmills on Lana'i and make that island completely
17 self-reliant on itself. I mean, it just baffles me why we
18 have to destroy resources from another island to make
19 another -- to make O'ahu ten-percent self-sustainable when we
20 could do a fraction of that to make Lana'i or Moloka'i or Maui
21 the first sustainable island. There's no state in the United
22 States of America that is completely self-sufficient. Now,
23 the likelihood of us doing that here in Hawai'i, there's
24 potential, but why not start by one island? And I don't mean
25 O'ahu because you'd probably have to rape all the resources of

1 every single island to get that island to be self-sufficient
2 and I don't think that is worth it.

3 So in going forward with your draft environmental
4 impact statement I would like you to look closely at the
5 cultural and environmental impacts that this may have on all
6 islands, but specifically Lana'i because the most impact, from
7 what I can see in the models and the research that I have
8 done, will greatly impact the island of Lana'i. So mahalo.

9 (Applause.)

10 MS. CHANG: Thank you.

11 We have Dave Doyle. Again, if anybody else would
12 like to speak.

13 MR. DOYLE: Hello, everybody. My name is David
14 Doyle and I am in the PV and renewable energy field. And I'm
15 a new resident to Maui. I've been here about a year and a
16 half. And I have four comments, I guess, to make about
17 tonight. And, first of all, thank you for coming and thank
18 you for having me here and allowing me to speak.

19 The first comment is I have lived in a number of
20 places around the United States and upon coming to Maui one of
21 the things that's really striking to me is the culture, the
22 prevalence of culture having Native Hawai'ians, you know,
23 speak at meetings just -- I have never seen that anyplace else
24 I've been. I've been in Colorado, Iowa, Maine in lobster
25 towns and Southern California and all over the place and I

1 have never seen the amount of culture imbibed into just local
2 meetings. And I think that it's a very important thing that
3 should be considered in the review process. And I think that
4 one other thing I have noticed is the different cultural
5 perspectives of the different islands. They're very unique.
6 Even though I haven't visited all of them, I see that they're
7 vastly different. Even on this island, you go to Hana and
8 it's completely different. And so I think that maybe more
9 than anyplace else in the country it's my belief culture is
10 very important and determining, you know, what happens in the
11 future for people who live here. So that's my first comment
12 is culture and hopefully it will be adequately addressed in
13 the review.

14 Secondly, as part of my work in the renewable energy
15 field one of the things I look at is home energy audits and --
16 in preparation for putting in a PV system or some other kind
17 of renewable energy. And the first thing that we look at is
18 how can we reduce the current consumption that we're using not
19 only to reduce the cost of the system that we might put into
20 place, but it just -- it just makes sense not to use so much
21 energy and are things that we aren't doing now that we could
22 do. And I hope that that would be looked at. A number of
23 other people have mentioned that, that basically are there --
24 We're talking 400 megawatts. What would have to happen on
25 O'ahu for 400 megawatts of savings to be realized? I may it

1 may be very painful, but I think that it should be looked at,
2 you know. What would it take rather than spending money on
3 some kind of -- some wind project? So energy conservation.

4 Thirdly, who is using the power over there?
5 Obviously the demand is -- at least from my perspective, is
6 O'ahu, that's why the cables are going there. So who is using
7 that power? I've heard here tonight that it's probably the
8 military. Well, my question there and comment would be: Is
9 the review process going to have access to what the military
10 thinks about this issue, energy supply on O'ahu? Because I --
11 my personal feeling is that they've probably thought about it
12 a lot. That they had -- and they -- I mean, energy security a
13 national security issue and I -- the military has thought in
14 detail about what happens if the grid goes down, what happens
15 if we have \$200 oil, \$400 oil, because they are going to
16 survive over there. And if they are the biggest consumer over
17 there, they know very well what they are going to do. And I
18 think that, granted, it's probably a secure, you know,
19 documentation, but I think it's vital to answering the
20 question of whether or not this is a good thing that we should
21 be doing to have access to what the military has thought about
22 that. So that would be my third comment.

23 Oh, and another comment there is that not only do I
24 think they're probably planning for, you know, eventualities,
25 but in my work with renewable energy I see across the country

1 at military bases they're putting things in place, they're
2 going to renewables right now. And so my question there is
3 that: If the military is the largest consumer on O'ahu and
4 they are because of national security going to renewable
5 systems, that seems to me that they would -- that would reduce
6 to some extent the amount of demand on O'ahu. So will those
7 things that the military is currently planning on doing be
8 folded in and taken into consideration in this review? That's
9 another question of how much power do we really need.

10 The fourth comment is basically I've heard it
11 mentioned here tonight that there might be a billion dollars
12 or \$2 billion spent. I don't know what that -- I mean, I'm --
13 this is my first meeting here on this topic, so -- but a
14 billion dollars, we could -- you know, we could put a lot of
15 PV systems on people's homes. And instead of giving the money
16 for a huge project or even a study, we could subsidize the --
17 through a tax credit or just give people money, give people
18 \$5,000 bucks to put a system on their house. A billion
19 dollars would -- I don't know the math, but that's a lot of
20 systems. And it may be 400 megawatts right there, I don't
21 know. So I would like to see that, alternatives using that
22 amount of money.

23 So the culture, the energy conservation, the
24 military involvement and alternatives for that amount of money
25 is the four things I would like to see and would hope that

1 they are addressed in this review which I -- my final comment
2 is that it seems to me maybe we've got the cart ahead of the
3 horse here. We've already decided that we want wind when
4 maybe we should be deciding whether or not we really need to
5 do this whole thing. So that's my comment and thank you very
6 much for listening. Appreciate it.

7 (Applause.)

8 MS. CHANG: My apologies. Rob Parsons had actually
9 signed up very early, so Rob is at this point the last person
10 who signed up. If anybody else would like to provide a
11 comment, please let me know.

12 Rob.

13 MR. PARSONS: Thank you.

14 Aloha. My name is Rob Parsons. I'm an
15 environmental coordinator with the Office of the Mayor. I'll
16 be very brief. Actually, I'm glad I got called up last
17 because this is about community input here. And as our Energy
18 Commissioner Doug McLeod explained earlier, we're listening as
19 much -- we will be submitting comments just as many of the
20 rest of you will. And I think it's fair to say that the
21 comments of the administration will be shaped as much by what
22 we've heard here tonight and what we hear also tomorrow on
23 Moloka'i and Saturday on Lana'i as by our own analysis. And
24 we do have -- we actually are -- our energy coordinator is
25 here. We've got a lot of expertise, but clearly there's a lot

1 of expertise in this room as well. So thank you all for being
2 here and sharing everything that you've shared.

3 I'm wearing this lei tonight by virtue of accepting
4 an invitation from our friends on O'ahu at the office of -- at
5 Al's office, DBEDT to assist them with some logistics here.
6 And I guess this is my reward for getting them to a good lunch
7 spot and making sure they didn't get lost on the way to the
8 hearing tonight. So it's been good spending part of the day
9 with you and hearing more about where you're at in this
10 process. And now you've got to hear where this community is
11 at. And the mayor's office will also have staff on Moloka'i
12 and Lana'i in the next couple of days helping you in the
13 same -- serving in the same regard that I have been.

14 Mayor Arakawa is probably done with his TV show by
15 now, that's why he couldn't be here tonight. I think Council
16 Member Baisa went to be on that show.

17 Anyway, I'm greatly appreciative for all of you in
18 this community that share so much and for taking the time to
19 come out and speak. Thank you.

20 MS. CHANG: Thank you, Rob.

21 I have Kimokeo.

22 MR. KAPAHULEHUA: Aloha kakou. I just wanted to say
23 that I'm for renewable energy. I think that you have to
24 address the concerns we have put before you tonight.
25 Everybody shared a great deal of concerns. But I also want to

1 come up before and not to let you go without telling you that
2 there's an 'Aha Ki'ole, this is members of the Hawai'ian
3 community that's made up on each of the islands' 'Aha Moku.
4 It's their kupunas that in each of the mokus have a -- a
5 target from the mountain to the sea and you should go to them
6 and get their concerns on each of these islands that you're
7 talking about because that would give you a better insight of
8 all these concerns we're talking about. That we need you to
9 go to them so they can address their cultural concerns and the
10 lifestyle we have in each of these islands, each of these
11 mokus and each of these ahupua'a. And so I hope that you go
12 and find this structure of government that we have called the
13 'Aha Ki'ole.

14 I myself am supportive of renewable energy. I would
15 like to have our kupunas and the people of each of the
16 mokupuni, which is the island, and the moku and the ahupua'a
17 to address to you on a one-to-one level. It's very difficult
18 for them to be here. This is not the kind of type of meeting
19 they would come and share their mana'o with you. Maybe not
20 saying that they're intimidated. They're not intimidated by
21 any of this, but they're -- they have their own environment
22 that they will sit down and share their mana'o and their
23 concerns. And this is not a particular area that they would
24 come from the island, come from the moku or come from the
25 ahupua'a.

1 So I just wanted to bring that to your attention and
2 your concern so that that could be addressed. It would
3 greatly help some of the things that we as a host people, the
4 Hawai'ians, have a way of talking to you in our environment.
5 So I would like to share that with you. And thank you very
6 much for coming here. We appreciate you being here. But we
7 hope that my concerns will take you to our kupuna and be able
8 to kuka and share their mana'o with you in this process you
9 call today. So mahalo and thank you so much. Aloha.

10 MS. CHANG: Mahalo. Okay. Our next speaker is
11 Ekolu Lindsey.

12 MR. LINDSEY: Aloha, everybody. My name Ekolu
13 Lindsey and I just had a few thoughts. I mean, everything has
14 been well covered tonight. And Dick Mayer and Irene Bowie, if
15 you can answer their questions, I think you might have a
16 chance. But, more importantly, if you can get past the people
17 of Lana'i and Moloka'i, you might have a better chance.

18 The way I see this, our islands, Maui, Moloka'i,
19 Lana'i, we're all paddling our canoe. We're moving along,
20 moving along nicely. Lana'i and Moloka'i could be paddling
21 their koa canoe and they're fixing 'em as they move along,
22 they're fishing, they're having a good time, they're enjoying
23 life. Maui's canoe is a bit brighter, nicer colors, 'cause
24 we've done a little better planning, have more people and
25 we're moving along. Now we have our kolohe brother over there

1 living on O'ahu, he's having good fun on his canoe, yeah,
2 plenty people on that canoe, but he's not taking care of his
3 canoe very well. Now he's asking for our help. Do we help
4 them?

5 Now, there's a psychology change that has to happen
6 on O'ahu. I forget the gentleman who spoke earlier about
7 waste, you cannot change 'em, they're going to waste that
8 energy. So if we decide, the communities need to decide that
9 we want to help our kolohe brother over there who's not taking
10 care of his canoe and the people on that canoe and if we
11 decide to help him, is there going to be a change? I don't
12 think so. I don't think that's going to happen.

13 Now, I'm all for renewable energy and all the
14 different opportunities that present itself as presented by
15 the former speakers. It's been -- I think it all should be
16 looked at. But I think what it comes down to is: Did you
17 guys ask the people of Lana'i and Moloka'i that -- if that's
18 what they want? Now, if I going to your house in Michigan and
19 I like put one canoe in your back yard for whatever reason
20 because you have a lake, I gonna ask you first. There's a
21 proper protocol. And protocol is nothing more than simple
22 basic rights, simple things that you gotta do to live in
23 society. You gotta ask. If you no ask, you're not --
24 correctly, then you're not gonna get.

25 So, you know, when I think about it, what do the

1 people of Lana'i and Moloka'i have to gain from helping their
2 brother on O'ahu? Nothing. So why they gonna help? Well,
3 then take a step back. How can we help the people of Lana'i
4 and Moloka'i? How about -- I've always wanted to say this
5 publicly and this was my chance -- so I wasn't going to say
6 it, but I'm going to say it. So I'm not representing my
7 father for most of you who know me. Okay? People of Lana'i
8 and Moloka'i, what's their problem over there? Why not give
9 'em free energy? You're using their land.

10 (Applause.)

11 MR. LINDSEY: You know, free energy to a certain
12 extent. What's the average household utilize? X amount of
13 kilowatt hours. Over that, hey, then give 'em a cheaper rate.

14 "Hey, I'm interested. What else you got?" What
15 about their future? "What about my children?"

16 "Hey, I'm gonna send your kids to University of
17 Hawai'i for free. I'm going to give them an opportunity for
18 an education so that they can decide what they want to do.
19 I'm also going to give them a job back home." These guys,
20 they like hunt, they like fish, they can sustain themselves
21 off of the land. And most of us cannot. That's why we're in
22 this predicament in the first place.

23 Now, free electricity; helping their children go to
24 school, whether it be, I don't know, a break or completely
25 free, that would be great; can give them a job. But the more

1 important thing for their culture and the society there is
2 access. They gotta have access to their fishing grounds.
3 They gotta have access to their hunting grounds. Once you put
4 these things up, gone forever, not going to get 'em back.

5 So I put the people on those islands on notice:
6 Whatever you give up, you're not going to get 'em back. So
7 what the selling price? Is it worth it for them? That's for
8 that community to decide. But I wanted to throw that out and
9 let you know that maybe if you talk to the right people, you
10 talk to the people that Hokuao mentioned. The kupuna over
11 there know. You cannot send somebody from the mainland to go
12 take care of local knowledge. You need local knowledge to
13 take care their own place.

14 The people of Lana'i, okay, there's a large land
15 owner over there that wanted to make all the decisions.
16 That's wrong. He may own the land, but the people own the
17 spirit. And it's for -- it's the responsibility of those
18 people to rise up and let the spirit be known to those people
19 who want to build. I think some -- a point can be reached
20 where a compromise can be reached if there's willing parties
21 to sit down. But you're going to have a very challenging
22 situation over there on the outer islands, so be mindful.

23 Oh, and thank you, Hokuao, for that wonderful talk.
24 I always listen to his talk. I learn so much from his mana'o.

25 But a four-year-old child asks his kupuna one day,

1 "Grandpa, why is saving these things important? Why is it
2 important that we save the plants, that we save the
3 archaeological sites, that we save the tales, that we say the
4 mana'o, the stories and everything of that area? Why is it
5 important?"

6 How do you respond to a four-year-old child with
7 that question? I know some of you have heard this before.
8 This is my dad talking. It's because it's who we are. That's
9 why we save that. If these things are lost; we have lost our
10 foundation, we have lost our stories, we have lost who we are.
11 And we will be like many other native cultures out there who
12 are lost once we give this up. But if you can find a way to
13 maintain its integrity. Not just this is a significant
14 cultural site, build all around them. This is significant
15 why? Because everything else around it provides the
16 significance and the people and the plants. Save those
17 things, find a way, I think can happen. But it's going do
18 take a lot of work and you guys got to ask nicely. Mahalo.

19 (Applause.)

20 MS. CHANG: Thank you so much.

21 Would anybody else like to provide a comment? This
22 is your opportunity. We actually published in the notice that
23 we were going to be here 'til 9:00, so we will here 'til 9:00.
24 Sandra, the court reporter, is going to be here 'til 9:00. If
25 anybody else after this would like to give your comment to

1 just Sandra, you're free to do that.

2 Before we close, Tony, would you like to make any
3 closing comments?

4 Well, again, once again, last chance? Anybody want
5 to come up.

6 Okay. Tony.

7 MR. COMO: Thanks, Dawn.

8 Again, I just -- I don't want to keep you any
9 longer, but I want to thank you for coming out. We got
10 tremendous comments. I've been doing meetings like this,
11 conducting environment analysis on various types of energy
12 structures for way too many years. Between last night on
13 O'ahu and tonight, I don't think I've ever had two meetings
14 run where we got absolutely the kind of things that we need.
15 We got comments, we've got passion, we've got information that
16 we need to consider when we're doing our job. So I just want
17 to thank you for the tremendous amount of valuable information
18 you have given us and good night and aloha.

19 MS. CHANG: One last thing before you leave, we are
20 having a -- the public comment period is going to be open 'til
21 March 1st. On this board, one of the banners there's a
22 whole -- numerous ways for to you submit your comments. I
23 think somebody said very appropriately, Kimokeo, for many
24 local people, public meetings like this is not the most
25 comfortable way for them to tell their mana'o. That doesn't

1 mean their mana'o is not important. So we would urge you if
2 you have 'ohana or if you have family members or community
3 members that still want to give us their mana'o, they can
4 e-mail it, check our website, they can fax it, they can mail
5 it, but please comment. I mean, we can't even begin to do
6 justice and honor without getting your mana'o so we genuinely
7 do mean that and we really would like your participation.

8 I think as many of you know, we had a meeting on
9 O'ahu last night, we will be on Moloka'i tomorrow night and we
10 will be on Lana'i on Saturday. So we do want to go out to
11 those communities and we're trying to do this in a very
12 respectful way.

13 And thank you so much. I just appreciated the
14 courtesy and the respect that everybody provided to each
15 other. This was really a wonderful meeting. And, again, we
16 will be here 'til 9:00. If you want to look at the banners,
17 take material, talk story or give your statement, your comment
18 to Sandra, please do so. Thank you so very much. Mahalo.

19 (Pause in Proceedings: 8:04-8:05)

20 PRIVATE STATEMENT OF PAUL PAGAY: My name is Paul
21 Pagay. I'm a former island resident from Lana'i. I live
22 on -- I live in Pukalani right now. So I'm trying to give the
23 perspective from a fisherman, from a hunter standpoint. I've
24 got a lot of family and friends still on the island. So they
25 talked about access, so there's a couple access that goes to

1 the fishing grounds there: Kaena, Awalua, Lapaiki, Kahue.
2 And I just want to know: Who's gonna maintain the roads?
3 Who's gonna -- Is it gonna be open to the public? And, again,
4 who's gonna maintain, who's gonna spend money on maintaining
5 these roads?

6 Also, right now the State leases the property, which
7 they do game management. I'm an animal lover, but, yet, I'm a
8 hunter. So now you got about 2,000 deers in that area, maybe
9 about a thousand or so feral sheep, Mouflon, so the State
10 provides seven -- or not in that area, they provide about five
11 water troughs right now for those deers and animals. So being
12 that the -- if the wind farm come in, what they going to do
13 with the dear? If eradication is involved, who's gonna
14 eradicate? What they gonna do with the meat which the people
15 use as stable food on the island? Again, what's going to
16 happen to the water? If they do eradication, I don't think
17 there's hundred percent they can kill all the animals, so that
18 small percentage, if you pull the water troughs, is that
19 cruelty to animals? So what's going to happen to the animals.
20 That's all.

21 (Pause in proceedings: 8:07-9:00)

22 MS. CHANG: Okay. That's it.

23 (The proceedings were adjourned at 9:00 p.m.)
