Subject: [HIREP Wind EIS] New Comment

A New Comment has been Submitted

Suffering the line losses of an undersea cable, especially at a billion dollar cost, is simply ridiculous. Generate the maximum renewable power here on Oahu BEFORE resorting to this insanity. Wind, solar, nuclear - go for all of them, and now. Do NOT think of biofuels as a positive alternative, since they continue to emit greenhouse gases, AND consume nearly as much energy as they produce, on a net basis. Don't run cables between islands, just to make Rupert Murdoch even more rich, at my expense.
