

The Hawaii State Energy Office has an exciting employment opportunity

ENERGY PROGRAM SPECIALIST

The Energy Program Specialist provides analytical support and project management for the Hawaii State Energy Office's support of energy innovation activities, programs and policies. Potential projects include, but are not limited to:

- Project management for the planning, design, and development of an energy innovation center.
- Project management for design of new visualization techniques and the use of energy sector data for these visualization efforts.

Recommended Qualifications:

- College degree in a social, physical or natural science.
- Minimum four years of work experience in such work as administering or evaluating programs to increase efficiency and economy; compiling data with respect to supply and demand; or researching scientific methods of problem solving. Two years of supervisory work experience.
- Contract/project management and procurement experience.
- Strong quantitative and qualitative analytical skills.
- Other desired skills include:
 - Prior work experience in data management, advanced visualization, energy policy, public policy, and planning methods
 - Understanding of the energy industry in Hawaii
 - Project management experience for data/IT related projects

Salary commensurate with prior work experience. Send comprehensive resume, cover letter, and salary history to:
